

FOR UK SMBS BIDDING INTO THE PUBLIC SECTOR — AND THE BID WRITERS WHO SERVE THEM

Keep the answer library current. The next tender's first draft assembles itself.

Every tender answers a buyer's question set from the same underlying material: policies, accreditations, case studies, CVs, method statements, past winning answers. Today that material lives in a folder, and the answer library is whoever has been there longest. Tenderhouse makes it a system — so the question set arrives and the draft is already half written, with every reused claim traceable to where it came from.

Where this actually stands — read this first

Available today

The Flowgrid OS platform this module sits on is live: the branded workspace, the cited knowledge vault your answer library would live in, and two shipped sibling modules — Groundwork and Grantwork — that already draft cited client documents from stored records.

Not yet built

Tenderhouse itself is specified and costed, not written. Nothing on this page is a working screenshot or a delivery promise. We are looking for a small number of design partners to shape it before the first line of code — and to tell us where this description is wrong.

What we intend to build

- **The question set as the unit of work.** Each question is tracked in its own right — required, drafting, review, final, submitted — not buried in one long document.
- **An answer library that earns its keep.** Past winning answers, policies, accreditations and case studies, retrieved by relevance rather than by memory.
- **Answer-library coverage.** The share of a new question set that existing material can already serve — turning "should we bid?" from a gut call into a computed one.
- **A social-value method statement** grounded in your own evidence, not generic commitments.
- **A bid/no-bid scorecard** and win rates by framework, buyer and value band.

The correctness problem we care most about

- **The danger is not invention — it is expiry.** The realistic failure mode in bidding is a statement that was true in 2024 asserted as current in 2026: a lapsed accreditation, a departed key person, an ageing case study.
- **So every reused claim carries a citation to its source bid,** and a reviewer can check whether it is *still true*. We treat that as a correctness requirement, not a nicety.
- **No auto-submit, ever.** A missed or wrong submission is unrecoverable and contractually consequential. Draft-first is absolute.
- **Missing facts appear as [TO CONFIRM]** rather than a confident guess.

WHY WE THINK THIS IS WORTH BUILDING

£1.5k–£8k to produce a single SME tender response	4–30 bids a year for a typical SME bidder	10–30% of the score now carried by social value in most tenders	20–35% typical unassisted win rate
---	---	---	--

Existing bid software is priced for enterprises and sold per seat to a single organisation. A bid consultancy needs the opposite shape: one branded workspace per client, each with its own answer library, none of them able to see another's. That is what Flowgrid OS already does for every other module — and it is the reason we think this belongs here rather than as another point tool.

Out of scope for a first phase

- **No portal scraping or tender discovery.** Find a Tender and Contracts Finder are not ours to automate, and you already have alerts.
- **No direct submission.** You submit through the buyer's portal, as you do now.
- **No automatic parsing of ITT documents** into question sets in phase one — paste and manual entry first, parsing once we have seen enough real question sets to do it properly.
- **No pricing model, e-signature or post-award contract management.**

We would rather ship a narrow thing that works than a broad thing that mostly does.

What being a design partner involves

- **An hour of your time** walking us through two real question sets and how you answer them today.
- **Telling us where this page is wrong.** The description above is a hypothesis built from desk research, not from watching you work.
- **First access** when it exists, shaped around your material, and a say in what phase one includes.
- **No commitment to buy,** and no charge for the sessions.

You can also start on the platform today — the workspace and vault are live, and your answer library is useful there before Tenderhouse exists.

Help us build the right thing.

Design partners get the module shaped around their real question sets — and an honest answer about when it will exist.
