Flowgrid OS

AI workspace for UK SMEs, charities and development trusts

Grounded in your own documents
flowgridos.co.uk · hello@flowgridos.co.uk

ONE WORKSPACE. YOUR BRAND. YOUR DATA.

Turn what your organisation knows into work you can trust.

Find cited answers, keep recurring work structured, and produce outputs ready for review. Flowgrid OS connects your source documents, confirmed facts and live projects in one workspace, and every output cites its source.

Who it's for. UK small organisations and specialist teams (SMEs, charities and development trusts) managing recurring bids, reporting, development projects and evidence-heavy work. No technical team needed.

Why it matters

- **One bill, one login.** Consolidate chat, documents, research, slides and projects into one workspace.
- **Your name on it.** Your logo, colours and house style are set up from day one, so it feels like your own tool.
- **You review everything.** Flowgrid never sends a document on your behalf. You check the citations, then you send.
- **No single-supplier dependence.** We match each task to the right AI model, so you get top-quality results without paying premium prices for simple jobs.

Built for privacy

- **Your data stays yours.** Your workspace is isolated from every other customer at the database level, not only by application code.
- **Zero-data-retention hosting.** AI requests go through one gateway to vetted providers with zero-data-retention hosting by default, and your documents are not used to train anyone's models.
- **UK GDPR, a DPA and an easy exit.** A UK GDPR Data Processing Agreement is part of your terms and names where your data is hosted. Export in standard formats (PDF, PowerPoint, CSV), with return and deletion agreed up front.

What you get

- ✓ **Cited answers**
  Ask in plain English. Every answer links to the document and page it came from, and says so when it can't find one.
- ✓ **Confirmed facts**
  Charity numbers, insurance dates, policy versions: review a fact once and every draft reuses it.
- ✓ **Branded exports**
  A conversation becomes a PDF; a funder response becomes editable PowerPoint.
- ✓ **Contacts**
  Organisations and people, with spreadsheet import, as a tab on any project.
- + **Email & calendar sync** · coming
  Gmail and Microsoft 365 triage and drafting.
- ✓ **Documents**
  Upload policies, minutes, bids and accounts (PDF, Word, Excel) and search across them all.
- ✓ **Projects and plans**
  Every project has its own chat and documents, with an optional plan of owned tasks, so work isn't rebuilt in every chat.
- ✓ **Research mode**
  More than a Google search: it reads the pages behind the results, picks out the relevant passages and cites each one, so you get an answer with its sources rather than a list of links. Switched on if you want it.
- ✓ **Usage and cost record**
  Every AI call is recorded with its usage and cost, visible in your workspace.
- + **Meeting intelligence** · coming
  Summaries and action points from your calls.

Built for your sector — optional modules

The core platform (documents, confirmed facts and projects) is always included. Switch on a sector module and your projects gain what your sector needs: a structured set of records, plus the reports and documents that are drafted from them. Every figure traces back to your own data. **Ask us for the one-pager on any of these.**

Groundwork · Development projects AVAILABLE IN PILOT

Community-led development projects: stage gates, funding, budget, risk and planning records, and client reporting, with monthly reports, feasibility studies and funding bids drafted from live records.

Grantwork · Grant funding AVAILABLE IN PILOT

Applications to monitoring: funder pipeline, award conditions, impact evidence and monitoring returns as a tab on any project, drafted from the results you recorded.

Costs that stay predictable

- **No surprise invoices.** You set spending limits: near the limit we switch to lower-cost models, and at the limit usage pauses.
- **Pilot places.** We are onboarding organisations in small pilot groups. Ask us about fit and pilot terms when you book a demo.

Bring one repeated workflow. We'll show you how it fits.

A 20-minute demo around a report, bid or return you already produce, on representative data. No slides, no signup. Email hello@flowgridos.co.uk or join the pilot list at flowgridos.co.uk.
