Groundwork

Development projects — a Flowgrid OS module for community-led development

AVAILABLE IN PILOT
Enabled per client workspace
flowgridos.co.uk

FOR CONSULTANTS RUNNING COMMUNITY-LED DEVELOPMENT PROJECTS

Keep the project spine current. The monthly client report writes itself.

Affordable housing schemes for CLTs and cohousing groups run six to twelve years across five sector-standard stages, and today they live in spreadsheets and Word. Every Flowgrid OS project already has its own chat and documents, with an optional plan; Groundwork gives a development project a stage-gated spine — then drafts the client documents from it, with every figure traceable to the record it came from.

Group RIBA 0–1 → Site RIBA 2–4 → Plan RIBA 2–4 → Build RIBA 5 → Live RIBA 6–7

Gates carry criteria and a named sign-off.

The registers behind the reports

- **Funding.** Sources, amounts sought and secured, drawdowns, and a programme catalogue that flags when a funder's terms were last verified.
- **Budget.** Line-by-line budget, forecast and actual, with variance calculated rather than typed.
- **Risk.** Likelihood, impact, owner, mitigation and review date.
- **Planning conditions.** Pre-commencement flags, discharge status and dates.
- **Stakeholders & tasks.** Who holds what, milestones, and statutory-tagged obligations.

Why the drafts are trustworthy

- **Figures come from rows, never the model.** Budget and funding tables render from your records; the AI writes the narrative around them.
- **Gaps are marked, not filled.** Missing facts appear as *[TO CONFIRM]* rather than a plausible invention.
- **Claims from your documents cite the page** they came from, resolvable back to the source.
- **Draft-first, always.** Every document lands watermarked DRAFT with a human review step. Nothing sends itself.
- **Stale programme terms warn on page one** of any bid built on them.

What it drafts

Monthly client report
Ten sections: position, programme, cost, risk, planning, contract, funding, statutory, decisions, next period.

Feasibility study
Site, need, planning context, design capacity, viability and delivery route — grounded in your documents.

Funding bid
Written to the target programme's own criteria, with the full funding stack and match.

Project health card
One-page PDF in your client's brand colour. No AI involved — pure calculation.

- ✓ **Editable Word output** — Native DOCX with references and a data-sources appendix.
- ✓ **Project-scoped chat** — Ask questions of one project's documents and records.
- ✓ **Version history per document** — Append-only; nothing is overwritten.
- ✓ **Every draft costed** — Model spend recorded per document, visible on your usage page.

10 / 10
figures in the first live client report traced back to a source record — no invented numbers

About a minute
to draft a full cited report — around 1p of model spend, metered per call

1–2 sec
to render a branded project health card

Who it's for

- **Development consultants and enablers** running 3–15 concurrent community-led schemes — CLTs, cohousing groups, community buildings.
- **Community Land Trusts and housing co-ops** managing their own scheme and reporting to a board.
- **Consultancies serving several clients:** one branded workspace per client, each one sealed off from the others at the database, with your practice's name on it rather than ours.

What it deliberately does not do

- **No Gantt chart.** Milestones and dates, not a scheduling tool competing with the one you already have.
- **No development appraisal engine.** A flat budget table with variance — appraisals stay in your spreadsheet, which is better at them.
- **No community-facing portal.** This is consultant-facing; what the client sees is the document you send them.
- **No automatic submissions.** Nothing is filed, sent or lodged on your behalf.

Narrow on purpose. The module earns its place on one loop — spine current, report drafts itself — rather than by replacing tools that already work.

Bring one real project. See the report it writes.
Enter a live project with us in under 90 minutes, and take away the first client report it drafts.
