RECURRING REVENUE · YOUR BRAND · NO PLATFORM REBUILD

Sell a branded AI workspace without building one.

Flowgrid OS lets agencies, MSPs and consultancies offer a complete AI operations suite under their own label. You own the client relationship; we handle the infrastructure, model routing, security and updates.

Who it's for. Agencies, MSPs and consultancies serving UK small organisations (SMEs, charities and development trusts) who want to sell a branded AI workspace to their clients without building or hosting one.

Why partner

- **Recurring revenue.** Per-seat subscriptions with margin you keep; economics are shared on a partner call.
- **Zero licensing overhang.** MIT/Apache stack end-to-end — no surprise commercial fees.
- **Sticky clients.** Documents, projects and usage data increase switching costs.

What your clients see

- **Branded outputs** in their logo and colours: PDF reports and editable PowerPoint.
- **Cited answers** that link to the document and page, grounded in their own documents.
- **Documents, confirmed facts and projects** in one workspace, on one monthly bill.

The platform you resell

1. **Brand layer**
   Client logo, colours, branded outputs
2. **Model router**
   Cost-routed open weights + fallbacks
3. **Documents & confirmed facts**
   Cited answers; each client isolated at the database level
4. **Projects & modules**
   Every project has chat, documents and a plan; sector modules add on top

Sector modules are your sales story. Each is a per-client switch, so the same platform sells into a different room: **Groundwork · Development projects** (community-led schemes) and **Grantwork · Grant funding** (applications and impact reporting) are available in pilot; Contacts switches on as a tab on any project. A module turns "an AI workspace" into "software for what you do", a far shorter sales conversation. **Separate one-pagers for each are available. Ask and we will send them.**

Partner terms

- **Per-seat wholesale pricing and margin model** are shared on a partner call, not published.
- **Pilot first.** We are onboarding in small pilot groups, so places are limited.

How it works

1. **Sign a client**
   Agree scope & collect brand assets.
2. **Provision workspace**
   Operator console creates tenant, keys & invites.
3. **Curate & train**
   Upload docs, run onboarding, set spending limits.
4. **Bill monthly**
   You invoice the client; we invoice you.

Become a Flowgrid OS partner.

Book a partner call and we'll share the operator console, margin model and onboarding runbook. Email hello@flowgridos.co.uk
